

McKEECO

GENERAL ENGINEERING PTY LTD

Single Log Feeder

One log at a time

- Single log feeder consists of fixed steps and moving arms. The latter are moved up and down by two hydraulic cylinders and lift the logs from one fixed step to the next.
- Single log feeder eliminates the need for conventional log singulators or unscramblers
- Tough design and few moving parts guarantee minimum maintenance and minimum wear.
- Comes in modular units for fast and easy installation.
- Proven in unattended operation.
- Handles diameters from 100 to 600mm.
